Choosing the Road
to Recovery..

About Our Center

From the moment you enter our doors you will experience a friendly, caring environment. Our homelike accommodations include large rooms and picturesque settings to complement the care you will receive from our professional staff of caregivers and physicians.

Telemedicine Services

Our Telemedicine service allows our residents to be examined by their doctors through the use of video conference technology and digital diagnostic tools. This virtual interaction can provide needed medical care and treatment while avoiding a stressful ambulance ride and uncomfortable hospital stay. Through our Telemedicine service, our residents can receive appropriate care from their physician and our nursing team when and where it's needed most.

Our portable Telemedicine equipment is state-of-the-art and available during the day, after hours, or on weekends without the need for the resident to leave the comfort of their own bed.

Benefits of Telemedicine Virtual Examinations

Physicians available 24 hours per day, 7 days per week

Allows for seamless care between the nurse, the Center's team of health care professionals and the primary care physician

Reduces unnecessary and stressful visits to the Emergency Room

Provides convenient, safe and comfortable care to our residents

Reduces the chance of transmission of a new illness

Reduces travel time and helps to control healthcare costs

The primary family member is notified and provided with updates

Helping Hands... Compassionate Hearts

Telemedicine Examinations: What to Expect

Once our team identifies a change in the resident's condition, we will immediately schedule an appointment with the physician and transport our Telemedicine equipment to the resident's bedside.

The remote examination tools allow the physician to:

- Listen to the resident's heart, lungs and abdomen with a high quality digital stethoscope.
- Observe while the nurse evaluates the resident's abdomen to look for signs of pain.
- View skin lesions and any swelling that may be present.
- Monitor the resident's temperature and oxygen saturation.
- Perform an EKG and review the readings remotely* (where this service is available).
- Provide treatment orders to the nurse.
